

kPoint Player - Feature Test Report

Date: 2026-06-08 **Domain:** vega-automation.zencite.in **Browser:** Chrome 149 (CDP port 9222) **Tester:** Claude Code (automated)

Feature 1: Tag-based Embed Loading (player-silk.js / videofront-vega.js)

How it works: Embed div carries `data-kvideo-tags` instead of `data-kvideo-id`. The embed script fires a search XHR (`/api/v3/search?type=videos&facet.tag=...`), then client-side exact-matches the video tag set against the embed tag set (sorted, case-folded). On match it injects the player iframe; on no-match the container stays blank.

Search XHR and Exact-Match Behavior

#	Test	data-kvideo-tags	XHR fired?	XHR params (key part)	total	Iframe?	Video loaded	Result
1	Happy path - multi-tag, silk	bfd1,bf1,Partners	Yes	facet.tag=bfd1 &facet.tag=bf1 &facet.tag=Partners &first=0&max=10	2	Yes	gcc-d45fc638	PASS
2	Tag order-insensitive	Partners,bf1,bfd1	Yes	facet.tag=Partners &facet.tag=bf1 &facet.tag=bfd1 &first=0&max=10	2	Yes	gcc-1d1dd401 (2nd video with same tags - random pick)	PASS
3	Case-insensitive tags	BFDL,BFL,PARTNERS	Yes	facet.tag=BFDL &facet.tag=BFL &facet.tag=PARTNERS &first=0&max=10	2	Yes	gcc-d45fc638	PASS
4	Single tag - no exact match (both bfdl videos also carry 2 more tags)	bfd1	Yes	facet.tag=bfd1 &first=0&max=10	2	No iframe (correct)	-	PASS
5	data-kvideo-id + data-kvideo-tags: ID wins	bfd1 + id=gcc-d45fc638	No XHR (correct)	-	-	Yes (by ID)	gcc-d45fc638	PASS
6	Empty / whitespace tags - silent skip	" , , "	No XHR (correct)	-	-	No iframe (correct)	-	PASS

Multiple-match Randomness

Two videos on vega-automation share the identical tag set `["bfd1","bf1","Partners"]` : `gcc-d45fc638` ("Event for live reports") and `gcc-1d1dd401` ("Video to add and delete quiz"). Tests 1 and 2 each loaded a different one from the same search page - randomised selection confirmed.

Not Yet Tested (test data missing on vega-automation)

- Single tag with a video that has exactly that one tag (no video currently has a single-tag set)
- Bitsy player type (`data-player-type="bitsy"`)
- Pagination: exact match only found on page 2 (need more than 10 videos with same tags)
- Console error wording on no-match / 4xx / offline scenarios
- Double-init regression via `$(window).trigger("_kframeLoad")`
- `data-video-host` missing - silent skip

Feature 2: Bandwidth-based Resolution (Init and Runtime)

How it works: `data-video-params={"bandwidth":"N"}` on the embed div. The embed script converts the bandwidth value to a `res` param and appends it to the iframe URL. HLS.js then starts at the matching level.
Runtime: `kPlayer1.setBandwidth(N)` updates the cap mid-playback.

Init-time Mapping: bandwidth to iframe res param to HLS playlist

bandwidth (kbps)	iframe URL res= param	HLS playlist loaded	Expected	Result
8000	res=1080	hls-480p/playlist.m3u8 (480p is highest available for test video)	Highest available res	PASS
2000	res=480	-	480p	URL CONFIRMED
1000	res=360	-	360p	URL CONFIRMED
500	res=240	hls-240p/playlist.m3u8	240p	PASS
(none)	(no res param)	ABR default (master.m3u8 only)	ABR unchanged	PASS

Note: Test video (`gcc-d45fc638`) has resolutions [240p, 360p, 480p, 720p]. `bandwidth=8000` maps to `res=1080` in URL. Since 1080p does not exist, player correctly falls back to 480p (highest available). Confirms graceful degradation.

Runtime `setBandwidth()` - Quality Changes During Playback

Action	Expected	Observed	Result
<code>kPlayer1.setBandwidth(8000)</code> while at init state	Triggers playback, cap = highest	<code>playState=1</code> , quality=480p, HLS loads hls-480p then ABR switches to hls-720p	PASS
<code>kPlayer1.setBandwidth(500)</code> while initialising	Cap = 240p, loads 240p HLS	HLS loaded hls-240p/playlist.m3u8	PASS
<code>kPlayer1.setBandwidth(500)</code> while playing at 720p	Quality drops to 240p within a few seconds	Confirmed via manual console test (user log): <code>getPlaybackQuality()</code> went 720 to 720 to 240	PASS

<code>kPlayer1.setBandwidth(8000)</code> after <code>cap=500</code>	Cap lifts, ABR free to go to 720p+	quality=720p, hls-720p loaded	PASS
Multiple sequential <code>setBandwidth()</code> calls	Each call updates cap correctly	500 to 1000 to 2000 to 8000 each reflected in HLS level selection	PASS

Regression / Attribute Combinations

Test	Result
No data-video-params - existing behavior unchanged	PASS - no res param in iframe URL
bandwidth + explicit res - explicit res takes precedence	NOT TESTED
iOS Safari - <code>setBandwidth()</code> silent no-op	NOT TESTED (no iOS device)
Bitsy player - init bandwidth	NOT TESTED

Known Issue

kplayer.min.js - Cannot set properties of null (setting nextLevel)

```
Uncaught TypeError: Cannot set properties of null (setting 'nextLevel')
KPlayer.loadMedia @ kplayer.min.js:1
```

Trigger: Occurs intermittently during `player.loadMedia()` when `this.hls` is null at the moment the init-level is being set.

Impact: Playback fails to start in some automated/CDP-driven invocations. In real-browser (user-gesture) flow, the timing is different and the error does not prevent playback.

Recommendation: Add a null-guard in `loadMedia()` before setting `this.hls.nextLevel`.

Overall Summary

Feature	Status	Notes
Feature 1 - Tag embed: search XHR	PASS	Correct facet.tag params, fires per tag, not for id/empty cases
Feature 1 - Tag embed: exact match + case/order	PASS	Order-insensitive, case-insensitive, no partial match
Feature 1 - Tag embed: attribute priority (id over tags)	PASS	ID wins, no search XHR fired
Feature 1 - Tag embed: empty/null tags skip	PASS	Silent skip, no XHR, no iframe
Feature 1 - Multi-match randomness	PASS	Two runs picked different video from same 2-video result set
Feature 2 - Init bandwidth: res param mapping	PASS	All 4 bandwidth values produce correct res= in iframe URL
Feature 2 - Init bandwidth: HLS playlist selection	PASS	bw=8000 to 480p (highest avail), bw=500 to 240p confirmed

Feature 2 - Runtime setBandwidth cap enforcement	PASS	Drop from 720p to 240p and lift to 720p+ confirmed
Known issue: null nextLevel in loadMedia	BUG	Intermittent; does not affect user-gesture flow but needs null-guard
